

Table of Contents

0	Introduction	6
0.1	Models in the IERS Conventions	7
0.1.1	Classification of models	7
0.1.2	Criteria for choosing models	7
0.2	Differences between this document and IERS Technical Note 32	8
0.3	Conventions Center	14
1	General definitions and numerical standards	15
1.1	Permanent tide	15
1.2	Numerical standards	16
2	Conventional celestial reference system and frame	21
2.1	The ICRS	21
2.1.1	Equator	21
2.1.2	Origin of right ascension	22
2.2	The ICRF	22
2.2.1	Optical realization of the ICRF	23
2.2.2	Availability of the frame	25
3	Conventional dynamical realization of the ICRS	28
4	Terrestrial reference systems and frames	31
4.1	Concepts and terminology	31
4.1.1	Basic concepts	31
4.1.2	TRF in space geodesy	32
4.1.3	Crust-based TRF	34
4.1.4	The International Terrestrial Reference System	34
4.1.5	Realizations of the ITRS	35
4.2	ITRF products	35
4.2.1	The IERS network	35
4.2.2	History of ITRF products	36
4.2.3	ITRF2005	37
4.2.4	ITRF2008, the current reference realization of the ITRS	39
4.2.5	ITRF as a realization of the ITRS	39
4.2.6	Transformation parameters between ITRF solutions	40
4.3	Access to the ITRS	40
5	Transformation between the ITRS and the GCRS	43
5.1	Introduction	43
5.2	The framework of IAU 2000/2006 resolutions	43
5.2.1	IAU 2000 resolutions	44
5.2.2	IAU 2006 resolutions	45
5.3	Implementation of IAU 2000 and IAU 2006 resolutions	45
5.3.1	The IAU 2000/2006 space-time reference systems	45
5.3.2	Schematic representation of the motion of the Celestial Intermediate Pole (CIP)	45
5.3.3	The IAU 2000/2006 realization of the Celestial Intermediate Pole (CIP)	46
5.3.4	Procedures for terrestrial-to-celestial transformation consistent with IAU 2000/2006 resolutions	47
5.4	Coordinate transformation consistent with the IAU 2000/2006 resolutions	47
5.4.1	Expression for the transformation matrix for polar motion	48
5.4.2	Expression for the CIO based transformation matrix for Earth rotation	48

5.4.3	Expression for the equinox based transformation matrix for Earth rotation . . .	48
5.4.4	Expression for the transformation matrix for the celestial motion of the CIP . . .	48
5.4.5	Expression for the equinox-based transformation matrix for precession-nutation . . .	49
5.5	Parameters to be used in the transformation	49
5.5.1	Motion of the Celestial Intermediate Pole in the ITRS	49
5.5.2	Position of the Terrestrial Intermediate Origin in the ITRS	51
5.5.3	Earth Rotation Angle	52
5.5.4	Forced motion of the Celestial Intermediate Pole in the GCRS	54
5.5.5	Free Core Nutation	57
5.5.6	Position of the Celestial Intermediate Origin in the GCRS	59
5.5.7	ERA based expressions for Greenwich Sidereal Time	59
5.6	Description of the IAU 2000/2006 precession-nutation model	61
5.6.1	The IAU 2000A and IAU 2000B nutation model	61
5.6.2	Description of the IAU 2006 precession	63
5.6.3	IAU 2006 adjustments to the IAU 2000A nutation	64
5.6.4	Precession developments compatible with the IAU 2000/2006 model	64
5.6.5	Summary of different ways of implementing IAU 2006/2000A precession-nutation	65
5.7	The fundamental arguments of nutation theory	66
5.7.1	The multipliers of the fundamental arguments of nutation theory	66
5.7.2	Development of the arguments of lunisolar nutation	66
5.7.3	Development of the arguments for the planetary nutation	67
5.8	Prograde and retrograde nutation amplitudes	68
5.9	Algorithms for transformations between ITRS and GCRS	69
5.10	Notes on the new procedure to transform from ICRS to ITRS	71
6	Geopotential	79
6.1	Conventional model based on the EGM2008 model	79
6.2	Effect of solid Earth tides	81
6.2.1	Conventional model for the solid Earth tides	81
6.2.2	Treatment of the permanent tide	88
6.3	Effect of the ocean tides	89
6.3.1	Background on ocean tide models	90
6.3.2	Ocean tide models	91
6.4	Solid Earth pole tide	93
6.5	Ocean pole tide	94
6.6	Conversion of tidal amplitudes defined according to different conventions	96
7	Displacement of reference points	99
7.1	Models for conventional displacement of reference markers on the crust	99
7.1.1	Effects of the solid Earth tides	99
7.1.2	Local site displacement due to ocean loading	108
7.1.3	S ₁ -S ₂ atmospheric pressure loading	112
7.1.4	Rotational deformation due to polar motion	114
7.1.5	Ocean pole tide loading	116
7.2	Models for other non-conventional displacement of reference markers on the crust	118
7.3	Models for the displacement of reference points of instruments	118
7.3.1	Models common to several techniques	118
7.3.2	Very long baseline interferometry	119
7.3.3	Global navigation satellite systems	119

8	Tidal variations in the Earth's rotation	123
8.1	Effect of the tidal deformation (zonal tides) on Earth's rotation	123
8.2	Diurnal and semi-diurnal variations due to ocean tides	124
8.3	Tidal variations in polar motion & polar motion excitation due to long period ocean tides	124
9	Models for atmospheric propagation delays	132
9.1	Tropospheric model for optical techniques	132
9.1.1	Zenith delay models	132
9.1.2	Mapping function	133
9.1.3	Future developments	134
9.2	Tropospheric model for radio techniques	135
9.3	Sources for meteorological data	136
9.4	Ionospheric model for radio techniques	137
9.4.1	Ionospheric delay dependence on radio signals including higher order terms . .	137
9.4.2	Correcting the ionospheric effects on code and phase	142
10	General relativistic models for space-time coordinates and equations of motion	151
10.1	Time coordinates	151
10.2	Transformation between proper time and coordinate time in the vicinity of the Earth .	153
10.3	Equations of motion for an artificial Earth satellite	155
10.4	Equations of motion in the barycentric frame	156
11	General relativistic models for propagation	159
11.1	VLBI time delay	159
11.1.1	Historical background	159
11.1.2	Specifications and domain of application	159
11.1.3	The analysis of VLBI measurements: definitions and interpretation of results .	160
11.1.4	The VLBI delay model	160
11.2	Ranging techniques	164
A	IAU NFA WG Recommendations	166
B	IAU Resolutions Adopted at the XXVIth General Assembly (2006)	168
B.1	IAU 2006 Resolution B1 on Adoption of the P03 Precession Theory & Definition of the Ecliptic	168
B.2	IAU 2006 Resolution B2 on Supplement to IAU 2000 Resolutions on reference systems	168
B.3	IAU 2006 Resolution B3 on the Re-definition of Barycentric Dynamical Time, TDB .	170
C	IUGG Resolution 2 Adopted at the XXIVth General Assembly (2007)	171
D	IAU Resolutions Adopted at the XXVIIth General Assembly (2009)	172
D.1	IAU 2009 Resolution B2 on IAU 2009 astronomical constants	172
D.2	IAU 2009 Resolution B3 on Second Realization of International Celestial Reference Frame	172
	Glossary	174
