Daily EOP Series Products from the JCET/GSFC ILRS AC

Erricos C. Pavlis
Joint Center for Earth Systems Technology, (JCET/UMBC), University of Maryland, Baltimore County

We will present a series of EOP products that are derived from our weekly analysis of LAGEOS and ETALON SLR data as part of our ILRS AC activities. The presentation will highlight the differences in the various series and compare them to other standard products (e.g. IERS series). An accuracy assessment of the products will also be included in the presentation.
