

Questions/Clarifications
Proposals for the IERS Combination Pilot Project

1. AICAS

- It seems to me that this proposal should be part of Step 2, since a combination of SINEX files including EOPs and station coordinates is foreseen. Is this correct ?

2. GRGS

- SINEX files resulting from a combination on the observation level belong to Step 1, according to the CPP description, rather than to the „special products“.
- Will SINEX files be generated eventually for this combination on the observation level, that can be compared and validated?

3. USNO

- Proposal for Step 2: since the combination is limited to EOPs, it should be considered as a „special product“ (and validation); Step 2 products should be reserved for the combination of station coordinates and EOPs, and possibly quasar coordinates.
