Table of contents

	IERS Technical Notes		page v
VLBI	Earth Orientation Parameters from IRIS-S VLBI Measurements:	GIUB 91 R 01	1
	Earth Orientation Parameters with estimated site velocities from the NASA Crustal Dynamics Project :	GSFC 91 R 01	3
	Fixed station and mobile site position results with estimated site velocities	GSFC 91 R 02	11
	Radio source positions from NASA Crustal Dynamics Project data:	GSFC 91 R 03	21
	Radio source positions from NASA Crustal Dynamics Project:	GSFC 91 R 04	31
	Summary Sheet for the 1991 GSFC submission to the IERS:		43
	Earth Rotation Parameters from DSN VLBI:	JPL 91 R 01	47
	Earth Orientation Parameters and Celestial and Terrestrial Reference Frames of NAOMIZ Analysis:	NAOMZ 91 R 01	61
	Polar motion and UT1 time series derived from VLBI observations:	NGS 91 R 01, 02	65
	Earth Orientation Results from the U.S. Naval Observatory VLBI Program:	USNO 91 R 02	73
LLR	Earth rotation (UT0-UTC) from Lunar Laser Ranging:	JPL 91 M 01	81
	Determination of universal time by Lunar Laser Ranging:	SHA 90 M 01	85
	UT0 and Variation of Latitude determination from Lunar Laser Ranging observations for 1969-1990:	UTXMO 91 M 01	87
SLR	Earth orientation and Site Coordinates from the Center for Space Research:	CSR 91 L 02	91
		CSR 91 L 03	99
	Earth orientation and station coordinates computed from 10.3 years of Lageos observations:	DGFII 91 L 01	107
	Earth rotation and station coordinates computed from SLR observations on LAGEOS:	DUT 91 L 01	117
	Earth Orientation Parameters and set of station coordinates:	GAOUA 91 L 01,02	123
	A 14 year SLR EOP series from LAGEOS Satellite Laser Ranging SL7.1 (G72):	GSFC 91 L 01	127
	Earth rotation from LAGEOS Laser Ranging:	NAL 91 L 01	131
	Earth orientation from LAGEOS Laser Ranging:	SHA 91 L 01	135
	Earth rotation parameters and station coordinates from LAGEOS Laser Ranging:	ZIPE 91 L 01, 02, 03	139

Table of contents (cont.)

Combination

A Combination of Earth Orientation Data : Space 90: JPL 90 C 01 143

Combination of Precise Observations of the Orientation of the Earth: NEOS 91 C 01 155

AAM

Effective Atmospheric Angular Momentum functions and related parameters computed at the U.S. National Meteorological Center: AER 87 * 01 157

Effective Atmospheric Angular Momentum functions at the European Centre for Medium-range Weather Forecasts: ECMWF 87 * 01 161

Effective Atmospheric Angular Momentum function computed from the Japan Meteorological Agency data: JMA 87 * 01 163

Effective Atmospheric Angular Momentum functions calculated at the U.K. Meteorological Office: UKMO 79 * 01 165

ALL RESULTS DESCRIBED IN THIS ISSUE ARE AVAILABLE ON REQUEST FROM THE CENTRAL BUREAU OF IERS.
