

Non-tidal Ocean Loading

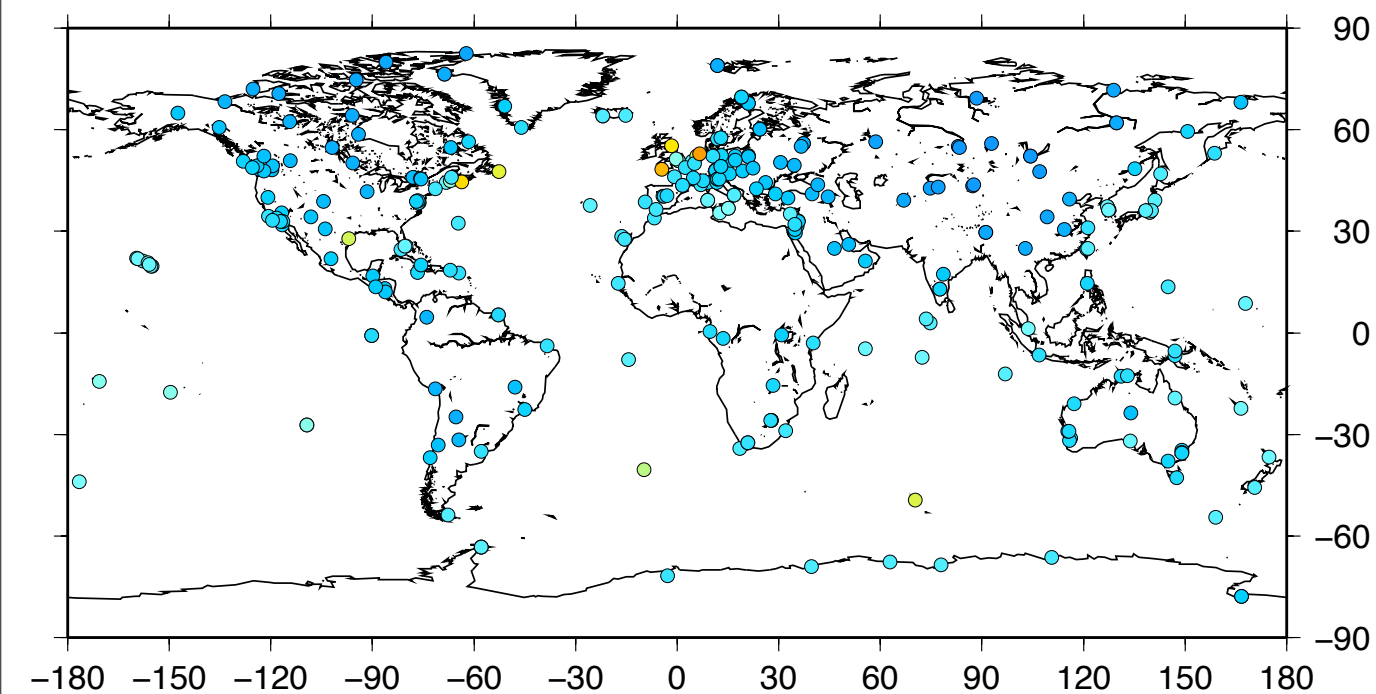

ECCO

- Estimating the Circulation and Climate of the Oceans
- Bottom pressure based on the MIT oceanic general circulation model
 - realistic boundaries and bottom topography, 46 levels w/ thickness from 10-400 m
 - $\pm 80^\circ$ of the equator
 - latitudinal grid spacing between 0.3° at the equator to 1° at the poles
 - longitudinal grid spacing of 1°
 - 12-hourly data from 1993 to the present
